

**TL-13227**

## **TORQ Locker TL-13227 Dana 30 JK Next Generation Installation Supplement**

Thank you for your purchase of the TL-13227 Dana 30 TORQ Locker for 2007 to 2017 JK and JKU Jeep with open differential cases.

On the TORQ Locker axle gears you will see blue custom thrust washers. These washers are specifically designed and manufactured for the TL-13227 installation and should not be used for any other purpose.

In this installation you will NOT be using the factory OE thrust washers as described in the standard Installation Manual. Simply replace the existing thrust washers with the new blue thrust washers and then follow the Installation Manual for the remainder of the installation process.

Note: In some installations binding is experienced in very tight turns and this can be eliminated by a slight reduction in the turn radius.

TORQ lockers are 100% made in the USA.
